

## ORIGINAL TÄLJSTEN WHISKY STONES : « THE PLEASURE OF CHILLED JUST RIGHT »

The **Original Täljsten Whisky Stones** are made in natural soapstone, extracted in Handöl in the region of Jämtland.

This 100% natural stone first absorbs and then slowly restores cold or heat. Soapstone products have been used by Swedes since centuries. The Vikings already shaped the soapstone into kitchen utensils !

As opposed to numerous reinvented legends on the subject, the use of soapstone to cool or keep cool is very recent. It was in the 90s that Marianne Berggrund produced « icecubes that never melt » for the very first time and baptised them **Whisky on the rocks Rocks**. Whisky stones were born!

The **Original Täljsten Whisky Stones** will enable you to reduce the temperature of your whisky from 20°C to 10°C with absolutely no dilution. Thanks to the **Original Täljsten Whisky Stones**, your favourite drink retains all its strength and you can savour your whisky chilled in its purest form with all its aromas and flavours intact.

The **Original Täljsten Whisky Stones** come packed in box sets of 8. A food bag **Cold Pack** containing no phtalalates or bisphenol A is also now included, enabling you to put all the stones in the freezer at once.

### ADVICE FOR USE

On the first day of use, rinse and dry the **Original Täljsten Whisky Stones** and place them in the freezer in the **Cold Pack** at least 2 hours before use.

When ready to serve your whisky, place 2 to 4 stones in a glass and then pour the drink onto them (*it is important to respect this order*). The drink will then cool without dilution.

For 4 cl of whisky, the reduction in temperature is 2,5°C per stone.

The **Original Täljsten Whisky Stones** are dishwasher-friendly.
